

Gerald

On June 30, 1981 James Pierret (w/Fansteel mystery) requested the copy of the inspection report analytical results of the June 23, 1981 inspection by Ecology & Env. Inc.

He was sent the inspection report but not the analytical results (they had not been completed). They were completed and ~~sent~~ sent to Reg III Sep 28, 1981. Pierret was never sent a copy of this.

In this inspection 5 of 12 monitoring wells were located. Jerry Black with the water resources board should have information on this.

State has no env action as yet but is planning inspection soon.

EPA has had no enforcement actions against Fansteel as far as I can find out. There have only been two inspections of the facility by EPA ~~etc~~
